

TIDAPARS INDUSTRIAL GROUP

Industrial Machine

- ❑ Plug Tray Manufacturing Machine
- ❑ Drier Machine Of Vegetable And Fruit
- ❑ Fresh Agricultural Products Packing Machine

Plug Tray Manufacturing Machine

Plug Tray manufacturing machine consists of two main lines:

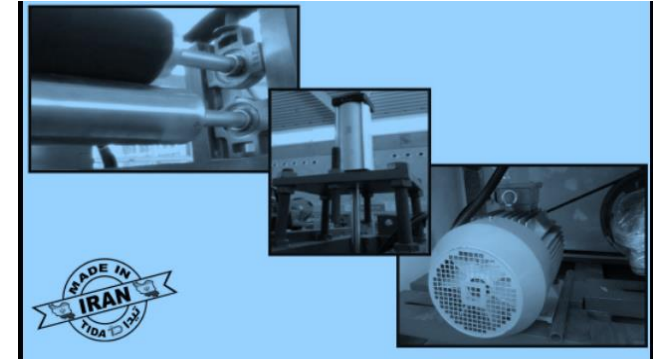

- 1- Extruder line
- 2- Press forming line

In extruder line (screw, cylinder, head and the thermal plates), raw materials, such as granules or grinding materials, are dumped into the material tank, then transformed into a warm sheet with variable thickness. At the next step, the sheet enters to the forming line and convert to a tray with molding press. The ability to produce different trays and containers is a prominent feature of this device.

Polystyrene seed tray

- ❑ Nowadays, most of the seedlings grow in polystyrene or plastic dishes (trays).
- ❑ Most of these trays have cone- shaped or inverted pyramid-shaped holes that narrows toward the bottom.
- ❑ Usually, the seedlings trays are formed of polystyrene.
- ❑ They are strong (rigid) and have a good stability which could be used several times depending on the used thickness.
- ❑ Besides, they have different volumes which each of them uses for special plants.
- ❑ Amongst the benefits of Plug Tray is to reduce the seedlings damage, the planting spaces, the seed consumption, fuel, fertilizer, energy and manpower.

Fresh Agricultural Products Packing Machine

- ❑ Flexible design for packaging a wide range of products
- ❑ Fast changeovers and adjustment for packaging various sized products
- ❑ Has a high sanitation level for quick and easy cleaning
- ❑ Applicable to different types of nylon with different material, thickness and width
- ❑ Design of a film roll replacement system easily and quickly by an operator
- ❑ Using mechanical controllers and PLC for optimal use of the device

Packing Machine

Increased shelf life combined with superior shelf presentation.

Innovative packaging design, low packaging and labor costs.

Wide range of indoor and outdoor packing solutions.

Integrated labelling, coding and pre-printed film options can be used.

Options of Packing Machine

- Printer unit
- Label installation
- Special mechanism for packing parts and very small objects.

Drier Machine Of Vegetable And Fruit

Features this machine:

1. Cycle heating, large capacity, metal body, energy saving.
2. Stainless steel metal body, durable, not easy to corrode.
3. 11-layer large capacity, large space.
4. Three fans, ventilation heating, heating block, even heat, less heat loss, power
5. Continuous constant temperature control technology.

- ❑ A dryer is a machine that separates the water from the food and keeps the food nutritious.
- ❑ Generally, the temperature can be controlled at 30 to 100 degrees, and the continuous low temperature constant temperature control technology can not only ensure the vitamins and other nutrients such as vitamins and trace elements of food.

Interesting, right?

This is just a sneak preview of the full presentation. We hope you like it! To see the rest of it, just click here to view it in full on www.TIDAPARS.com
